FOREIGN AGRICULTURAL TRADE OF THE UNITED STATES

Digest

U.S. agricultural imports for consumption totaled \$3,988 million in fiscal 1964-65, down 3 percent from a year earlier. There were smaller purchases of both supplementary (partially competitive) and complementary (noncompetitive) products. The decrease in supplementary imports reflected smaller purchases of beef and veal, sugar, and cotton. The decline in sugar represented lower prices, since the quantity increased slightly. A significant decline in meat imports -- primarily reduced imports of boneless beef -- reflected a significant shift in the pattern of world meat trade. European demand for meat imports increased greatly because of relatively small production and higher incomes there. Argentina had less meat to export. U.S. imports of meat from Australia, New Zealand, and Mexico were considerably below the level of the voluntary agreement with these countries. Declines in complementary products occurred for coffee, tea, silk, unmanufactured fibers and carpet wool.

* * * * *

Agricultural exports to the European Economic Community totaled \$1,371 million in fiscal 1964-65 compared with \$1,333 million the year before. Exports of variable and non-variable levy commodities rose above the 1963-64 level despite a 2 month longshoremen's strike at East Coast and Gulf ports. Exports of feed grains rose sharply to \$378 million from \$278 million. This not only reflects the expanding demand for animal feeds accompanying the growth of livestock industries, but also an increase in the livestock feeding rate and a longer feeding period. Somewhat offsetting the gain for feed grains were declines for wheat and flour, pork, poultry meat, and rice. Commodities not subject to the variable levies rose to \$908 million from \$884 million. There were substantial increases in exports of soybeans, vegetable oils, variety meats, and tallow.

Table 3 highlights the foreign market for individual commodities. In fiscal 1964-65 the export market provided an outlet for over half the production of U.S. wheat, milled rice, dry edible peas, and soybeans; two-fifths of nonfat dry milk, tallow, and hops; about a third of the dry prunes and cottonseed; and about one-fourth of the cotton, tobacco, raisins, and flaxseed production. Exports accounted for 31 percent of the farm sales of grain sorghums, 30 percent for corn, and 20 percent for barley.

SPECIAL in this issue

U.S. AGRICULTURAL IMPORTS DECLINED 3 PERCENT IN FISCAL 1964-65

by

Dewain H./Rahe 1/

U.S. agricultural imports for consumption totaled \$3,988 million in fiscal 1964-65 compared with \$4,096 million in the previous year. The 3 percent decline resulted from smaller purchases of both supplementary (partially competitive) and complementary (noncompetitive) products. The decrease in supplementary imports reflects smaller purchases of beef and veal, sugar, and cotton. Declines in complementary products occurred for coffee, tea, silk, unmanufactured fibers, and carpet wool (table 1).

Imports of agricultural products have remained relatively stable in the past 10 years, averaging around \$4 billion a year. However, there have been some shifts in the commodities imported. Imports of dutiable cattle, and beef and veal have generally increased. Beef imports declined sharply in the past year because of increased demand for beef and veal in Western Europe and relatively large production in the United States. There are also increases for tobacco, fruits and vegetables -- mostly fresh fruits and vegetables imported during the domestic U.S. off-season. There has been a downward trend for oilseeds and products, grains and preparations, and sugar.

Imports of nonagricultural products rose to \$15.7 billion in 1964-65 from \$13.7 billion a year earlier. The rise was associated with the continuing growth in economic activity in the United States for the past 3 years. Gains in nonagricultural imports have been for raw materials as well as manufactured products.

Supplementary Products

Imports of supplementary products fell to \$2,129 million in 1964-65 from \$2,225 million in the previous year. The principal value declines occurred for beef and veal, mutton, cotton, grain, and sugar. These declines were somewhat offset by gains in dairy products, apparel wool, nuts and preparations, oilseeds and products, vegetables and preparations, and tobacco. The decline in sugar reflects lower prices since quantity increased slightly.

1/ Agricultural Economist, Trade Statistics and Analysis Branch, Foreign Development and Trade Division, Economic Research Service.

Total imports	4,096	3,988	-3

Animals and animal products

Imports of dutiable cattle rose to 612,000 head in 1964-65 from 606,000 a year earlier. Imports of 1,032,000 head in 1962-63 were a record, because both Mexico and Canada were forced to ship large quantities to the United States because of drought. Most dutiable cattle imported are feeders and stockers imported by farmers and ranchers for feeding. The relatively high level of U.S. production has discouraged Mexican and Canadian producers from shipping these cattle to the United States. In addition, relatively high prices and meat shortages in certain areas of Mexico resulted in fewer shipments to the United States. In fiscal 1964-65, Mexico accounted for about 60 percent of the dutiable cattle imported to the United States; Canada accounted for the remainder.

U.S. imports of dairy products rose to \$68 million from \$57 million a year earlier. The increase resulted from larger imports of cheese and casein. About 26 percent of U.S. imports of dairy products are under quota regulations of Section 22 of Agricultural Adjustment Act, as amended. Cheese imports represented 60 percent of total imports of dairy products. The principal suppliers of cheese were Italy, Switzerland, Denmark, New Zealand, the Netherlands, and France.

U.S. imports of meats fell sharply to \$402 million from \$519 million in 1963-64. The decline resulted from substantial decreases in imports of beef and veal, and mutton and lamb. Pork imports increased slightly.

Imports of beef and veal fell to 665 million pounds in 1964-65 from 1,066 million, a drop of 38 percent. The decline resulted primarily from a substantial shift in the pattern of world beef trade. In the past year, Australia and New Zealand have been shipping more of their beef to Western Europe because of favorable European prices. In addition, U.S. production of cow beef, which is similar to imported beef, has increased sharply. Moreover, exports from Argentina have fallen considerably because of the rebuilding of herds from the low level of the previous year, when herds were reduced because of drought.

Although the United States has voluntary agreements with Australia, New Zealand, Ireland, and Mexico to limit shipments of fresh or frozen beef to the United States, imports from these countries were well below the agreed levels. Imports of certain meats may also be regulated under specified conditions as provided by P.L. 88-482. About 56 percent of U.S. boneless beef imports entered on the East Coast ports, 19 percent on the Gulf ports, and 14 percent on the West Coast ports. Most U.S. beef imports were used for manufacturing purposes to make such products as prepared hamburgers, luncheon meats, and frankfurters.

Imports of pork increased to 231 million pounds in 1964-65 from 206 million a year earlier. The increase reflects larger imports of fresh pork as well as canned hams and shoulders. About two-thirds of the pork imports were canned hams and shoulders mainly from Denmark, Poland, and the Netherlands. Canada accounted for most of the 43 million pounds of fresh pork. Imports of pork in the past year were encouraged by higher prices and the limited supply in the United States.

Hides and skins.--U.S. imports of hides and skins totaled \$70 million in 1964-65 compared with \$66 million in 1963-64. Most of the imports represented goat, sheep, kip, and lamb skins produced in small quantities in the United States.

U. S. IMPORTS OF MEATS

U. S. DEPARTMENT OF AGRICULTURE

NEG. ERS 3933-65 (9) ECONOMIC RESEARCH SERVICE

Fig. 1

Demand for leather products from these skins has expanded in the past few years, reflecting the larger purchasing power.

Apparel wool.--U.S. imports of apparel wool rose to 199 million pounds in 1964-65 from 131 million a year earlier. The increase resulted from a gain in U.S. mill use of apparel wool and a continued decline in domestic wool production. In addition, lower world prices encouraged imports. Apparel wool imports represent about two-fifths of total apparel wool consumption in the United States. In recent years there has been a large shift to synthetic fibers in the clothing industry. Mill consumption of man-made fibers has increased by over two-thirds in the past 5 years, while consumption of wool has been relatively stable.

Cotton.--U.S. agricultural imports of cotton excluding linters totaled 116,000 bales in 1964-65 compared with 136,000 a year earlier. Imports of cotton except short Asiatic are regulated by quotas. Long staple imports are limited to 95,000 bales on an August 1-July 31 year. Imports of upland cotton (under 1-1/8 inches) are limited to 30,000 on a September 19-September 18 year. Changes in cotton imports generally reflect the filling of the quota in different periods of the quota year.

Fruits and preparations.--U.S. imports of fruits and preparations totaled \$122 million, about the same as in the previous year. Increases for olives in the brine, canned mandarin oranges, pineapples, and berries were about offset by declines in apples and citrus products. Imports of citrus products in the previous year were up sharply because of reduced supplies from Florida because of frost damage in 1962-63. A substantial part of the imports of fruits was fresh products imported during the domestic off-season.

Grains and preparations.--U.S. imports of grains and preparations totaled \$44 million in 1964-65, slightly below the previous year. Imports of grains are very small when compared to exports. Barley accounted for 30 percent of total grain imports. The strong demand for grains in the industrial countries of Western Europe and Japan has discouraged most producers from shipping their products to the United States. Wheat imports are regulated under Section 22 of the Agricultural Adjustment Act of 1934, as amended, while imports of other grains are unrestricted.

Sugar.--U.S. imports of sugar rose to 3.9 million short tons from 3.6 million tons in 1963-64. However, the value fell to \$444 million from \$539 million because of lower prices. The lower prices resulted from the substantial gain in world sugar production, which rose to 70.1 million short tons in 1964-65 from 59.4 million in 1963-64. Sugar imports represented about two-fifths of U.S. sugar consumption. The principal suppliers were the Philippines, Mexico, Dominican Republic, Peru, Brazil, and Australia.

Oilbearing materials and products.--Imports of oilbearing materials and products rose to \$183 million in 1964-65 from \$154 million a year earlier. The increase reflects a substantial gain in imports of copra, coconut oil, cocoa butter, castor oil, and palm kernel oil. A substantial part of oil imports represents products with special properties not available from domestic oil. Imports of oilbearing materials and products have been relatively stable in the past few years. In contrast, exports of oilseeds and products have risen phenomenally in the past decade. In the 1930's the United States was a net importer of oilseeds and

products. Larger imports of copra, which accounted for nearly half the total increase in 1964-65, stemmed from increased purchases from the Philippines.

Vegetables and preparations.--U.S. imports of vegetables and preparations rose to \$115 million in 1964-65 from \$99 million in the previous year. The increase reflects larger imports of potatoes, tapioca, tomatoes, and fresh cucumbers. However, most of the rise was accounted for by white potatoes which were in short supply in the United States in the past year. A substantial part of the imports of vegetables and preparations represents imports of fresh vegetables during the domestic off-season, mainly from Mexico and the Central American Republics.

Tobacco.--U.S. imports of unmanufactured tobacco rose to 184 million pounds in 1964-65 from 166 million a year earlier. Cigarette leaf accounts for about 70 percent of U.S. imports of tobacco and consists mainly of oriental types used for blending with domestic tobacco to produce the taste and aroma desired by U.S. smokers. In recent years, imported tobacco has accounted for about 6 percent of tobacco use in making U.S. cigarettes. The principal sources of oriental tobaccos have been Turkey and Greece. In addition, the United States also imports some cigar tobacco and other tobaccos for other special uses.

Complementary Products

Imports of complementary products fell to \$1,859 million in 1964-65 from \$1,871 million in the previous year. Most of the decline was accounted for by smaller imports of coffee, carpet wool, hard fibers, and silk. Somewhat offsetting were gains for bananas, cocoa beans, essential oils, crude natural rubber, and spices.

Bananas.--U.S. imports of bananas totaled 3,493 million pounds in 1964-65 compared with 3,503 million a year earlier. The higher value reported in 1964-65 reflected undervaluation by importers in the previous year. The principal suppliers were the Latin American Republics -- mainly Ecuador, Honduras, Panama, and Costa Rica.

Coffee.--U.S. imports of coffee totaled 2,686 million pounds in 1964-65 compared with 3,267 million in the preceding year. The decline resulted in smaller imports from Brazil because of frost damage to the Brazilian coffee crop. Brazil accounted for only about 27 percent of U.S. coffee imports in fiscal 1964-65. The other principal suppliers were Colombia, Mexico, Guatemala, and Peru. In addition, there were large imports from Africa, especially Angola, Ethiopia, Ivory Coast, and Uganda. Coffee trade is regulated by the International Coffee Agreement of which the United States is a member.

Cocoa beans.--U.S. imports of cocoa beans rose to 651 million pounds in 1964-65 from 536 million a year earlier. Value increased to only \$124 million from \$122 million reflecting a sharp decline in prices from the previous year. World cocoa production in the past year increased by 18 percent, causing the sharp drop in price. The principal suppliers were Ghana, Nigeria, Brazil, Ivory Coast, the Dominican Republic, and Ecuador. Cocoa bean prices have fluctuated widely from year to year because of sharp changes in production and small carryover stocks in producing countries.

Carpet wool.--U.S. imports of carpet wool fell to 131 million pounds in 1964-65 from 182 million a year earlier. Relatively higher prices for carpet wool discouraged importers from purchasing large quantities in the past year. In addition, the carpet industry has shifted to the use of more synthetic fibers in carpet manufacturing. In the past year it is estimated that about 48 percent of U.S. carpets are made of man-made fibers. The principal suppliers were New Zealand and Argentina, which accounted for about two-thirds of U.S. imports of carpet wool.

Tea.--U.S. imports of tea totaled 129 million pounds in 1964-65 compared with 131 million a year earlier. Tea imports have been relatively stable at around 125 to 130 million pounds for the last few years. The principal suppliers were Ceylon, India, Indonesia, and Kenya.

Hard fibers.--U.S. imports of hard fibers totaled \$30 million in 1964-65 compared with \$41 million a year earlier. There was an increase in quantity reflecting a change in the classification of imports. In recent years there has been a substantial demand for hard fibers in making baler and binder twine, despite the tendency of some manufacturers to use more synthetic fibers in twine production.

Rubber.--U.S. imports of natural rubber rose to 1 billion pounds in 1964-65 from 853 million pounds a year earlier. Value increased to \$192 million from \$185 million. Lower prices encouraged U.S. manufacturers to import more crude natural rubber in 1964-65. Principal suppliers were Indonesia, Malaysia, and Liberia. Crude natural rubber accounted for around one-fifth of total rubber used in the United States in the past year compared with over four-fifths in the early 1950's.

Export Highlights

EXPORTS TO THE EUROPEAN ECONOMIC COMMUNITY, JULY 1964-JUNE 1965

U.S. agricultural exports to the European Economic Community (EEC) in July-June of 1964-65 were \$1,371 million, slightly higher than the previous year's total of \$1,333 million (table 2). Exports of both variable levy and non-variable levy commodities rose above the 1963-64 level despite a 2 month longshoremen's strike at most East Coast and Gulf ports.

Feed grains are the only variable levy commodity showing a higher total in July-June of 1964-65 than in the previous year, rising sharply to \$378 million from \$278 million. This not only reflects expanding EEC demand for animal feeds accompanying the growth of its livestock industry, but also an increase in the livestock feeding rate in 1964-65 and a longer livestock feeding period because of the unusually wet spring in Western Europe. Moreover, yields of hay and pasture were low due to the drought of last summer, and EEC feed grain production was down slightly in 1964. The fall in U.S. exports of milled rice, wheat, and pork is exaggerated somewhat by the unusual circumstances of 1963-64. In that year, Italian rice production was down for the second consecutive year and crop losses led to a reduction in EEC wheat production. Pork exports were high due to meat shortages in France and the Netherlands. While exports of milled rice and wheat in July-June of 1964-65 were also below the 1962-63 total, pork exports were slightly above the corresponding figure for 2 years ago. Poultry and egg exports declined in 1964-65 from a year earlier. The rise in exports of turkeys, other fresh poultry, and canned poultry was not sufficient to offset the sharp decline in exports of broilers and fryers. The variable levies on broilers and fryers are considerably above the levies on turkeys.

The rise in U.S. exports of non-variable levy commodities was due chiefly to the sharp increase in oilseed cake and meal exports. The dock strike temporarily halted shipments of soybeans for crushing and shipments of cake and meals. When shipping was resumed, importers requested cake and meal rather than soybeans for crushing as they wanted to replenish their supplies, and facilities for crushing are limited. Correspondingly, soybean exports to the EEC in July-June of 1964-65 were only slightly higher than in the previous year. Exports of vegetable oils also rose sharply in 1964-65 to \$41 million from \$30 million. On the other hand, U.S. exports of fruits and vegetables did not recover from the decline of 1963-64, which was partly caused by a frost in Florida that sharply reduced U.S. supplies of citrus fruit. Unmanufactured tobacco exports to the EEC, which are facing increasing competition from Rhodesia, have not changed substantially since 1962-63. While exports of cotton fell in July-June of 1964-65 to \$127 million from \$191 million, they remained substantially above the 1962-63 level.

1/ Compiled from U.S. Bureau of the Census data.

2/ Classified for identification of commodities subject to the variable levies which were put into effect between July 30, 1962 and September 1, 1964. The classification is designed to show the overall change in exports of these commodities rather than to measure the impact of the variable levies on exports of these commodities.

3/ Exports of wheat flour to Italy include donations under Titles II and III of P.L. 480.

4/ Import duty for canned poultry is bound under the General Agreement on Tariffs and Trade at 21 percent ad valorem.

5/ Preliminary.

EXPORTS COMPARED WITH PRODUCTION

The portion of U.S. agricultural production marketed abroad has been increasing in recent years. Exports in fiscal 1964-65 were 16 percent of cash receipts from farm marketings. They were 14 percent in fiscal 1962-63.

Several commodities in table 3 have made a substantial contribution to the growing importance of exports. Exports of nonfat dry milk and soybeans expanded more than production between 1960-62 and 1965, and exports of hops increased, even though production declined. Most of the increased production of dried edible peas went into the export trade. Commodities showing a moderate increase in the share of production exported include wheat, rice, dried prunes, dried edible beans, and corn. Corn exports rose in 1964 despite a decline in production, while there was little change in production of wheat and dried edible beans. The share of production exported declined for cotton, tobacco, dried whole milk, and barley. While cotton production rose over the period, cotton exports declined. Although tobacco exports did not fall, they failed to match the rise in production.

The export market is particularly important for a number of commodities in table 3. In fiscal 1964-65 over half of the U.S. production of wheat, milled rice, dried edible peas, and soybeans was marketed overseas and over 40 percent of the nonfat dried milk, tallow and hops was exported. Exports of dried prunes and cottonseed were almost one-third of production. About one-fourth of the cotton, tobacco, raisins, and flaxseed produced in 1964 went to foreign markets. The share of production exported was 24 percent for grain sorghums, 15 percent for corn, and 14 percent for barley. However, a large part of the production of these 3 commodities is utilized on the farm for animal feeds. The portion of farm sales exported is therefore substantially higher than the share of production exported -- 31 percent for grain sorghums, 30 percent for corn, and 20 percent for barley.

Table 3.--U.S. agricultural exports of specified commodities compared with production: Quantity
fiscal years 1960-62 average, 1963, 1964, and 1965

2/ Less than 500.

3/ Reported in value only.

4/ Excludes the weight of "other hides and skins," reported in pieces only.

Explanatory Note

U.S. foreign agricultural trade statistics in this report include official U.S. data based on compilations of the Bureau of the Census. Agricultural commodities consist of (1) nonmarine food products and (2) other products of agriculture which have not passed through complex processes of manufacture such as raw hides and skins, fats and oils, and wine. Such manufactured products as textiles, leather, boots and shoes, cigarettes, naval stores, forestry products, and distilled alcoholic beverages are not considered agricultural.

The trade statistics exclude shipments between the 50 States and Puerto Rico, between the 50 States and the island possessions, between Puerto Rico and the island possessions, among the island possessions, and intransit through the United States from one foreign country to another when documented as such through U.S. Customs.

EXPORTS The export statistics also exclude shipments to the U.S. armed forces for their own use and supplies for vessels and planes engaged in foreign trade. Data on shipments valued at less than \$100 are not compiled by commodity and are excluded from agricultural statistics but are reflected in nonagricultural and overall export totals in this report. The agricultural export statistics include shipments under P.L. 87-195 (Act for International Development), principally sales for foreign currency; under P.L. 83-480 (Agricultural Trade Development and Assistance Act), and related laws; and involving Government payments to exporters. (USDA payments are excluded from the export value.) Separate statistics on Government program exports are compiled by USDA from data obtained from operating agencies.

The export value, the value at the port of exportation, is based on the selling price (or cost if not sold) and includes inland freight, insurance, and other charges to the port. The country of destination is the country of ultimate destination or where the commodities are to be consumed, further processed, or manufactured. When the shipper does not know the ultimate destination, the shipments are credited to the last country, as known to him at time of shipment from the United States, to which the commodities are to be shipped in their present form. Except for Canada, export shipments valued \$100-\$499 are included on the basis of sampling estimates; shipments to Canada valued \$100-\$1,999 are sampled.

IMPORTS Imports for consumption consist of commodities released from U.S. Customs custody upon arrival, or entered into bonded manufacturing warehouse, or withdrawn from bonded storage warehouse for consumption. The agricultural statistics exclude low-value shipments from countries not identified because of illegible reporting, but they are reflected in nonagricultural and overall import totals in this report.

The import value, defined generally as the market value in the foreign country, excludes import duties, ocean freight, and marine insurance. The country of origin is defined as the country where the commodities were grown or processed. Where the country of origin is not known, the imports are credited to the country of shipment.

Imports similar to agricultural commodities produced commercially in the United States and others that are interchangeable in use to any significant extent with such U.S. commodities are supplementary, or partly competitive. All other commodities are complementary, or noncompetitive.

Further explanatory material on foreign trade statistics and compilation procedures of the Bureau of the Census is contained in the publications of that agency.
